

Professional Disinfecting Services

Business Re-opening?

Keep your customers and employees safe with medical grade COVID-19 disinfection other cleaning companies can't provide. Our Disinfection Procedures and Equipment are what makes AMPOL the # 1 choice for Total Disinfection.

Proprietary UVC Air Sanitizers & HEPA Hogs

At AMPOL, our capabilities in UV technology set the standard for Facility Disinfection. Our UVC air sanitizers are self-fabricated and capture 99.97% of all particles in the air. AMPOL also provides the best option with our self-fabricated UV HEPA Hogs for disinfecting large industrial spaces.

Medical & Industrial Grade Equipment

We use industrial strength foggers and disinfectants with chemicals that are recommended by the EPA to combat viruses and bacteria. Our employees wear fully protective PPE and have the equipment necessary to disinfect both porous and non-porous surfaces, making AMPOL the best choice for total disinfection.

Certified Industrial Hygienist & PHD Analysis

Our disinfection process incorporates real-time data on the cleanliness of a surface. We measure RLU (Relative Light Units) that cells emit, and strive for hospital grade levels of disinfection. We also have the ability to analyze surfaces for the presence of COVID-19.
